

RAHUL SHARMA

Full Stack AI-Native Developer | Jaipur, Rajasthan

+91-8955102520 | shrahul520@gmail.com | rahulsharma128.github.io | linkedin.com/in/rahul-sharma-b02486224 | github.com/Rahulsharma128

SUMMARY

Full Stack AI-Native Developer with 3 years building scalable web applications (MERN, Next.js, Go) and integrating LLM APIs (Gemini) into production RAG-based chatbot workflows. Founder & sole engineer of **Drobe**, an AI-powered virtual try-on platform spanning Flutter, Go, and Next.js, with production-grade security and payment infrastructure. Cloud-proficient on AWS and Azure.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Go

Frontend: Next.js, React.js, Vue.js

Backend & AI: Node.js, REST API Design, LLM Integration (Gemini API), Retrieval-Augmented Generation, YOLOv5, MCP

Infrastructure: AWS, Azure, Docker, Docker Compose, CI/CD, GitHub Actions, GitLab CI

Databases: MongoDB, PostgreSQL, Prisma (ORM), Redis

Security: OAuth/JWT

Testing: Playwright (E2E), Jest

EXPERIENCE

JPloft June 2025 – Current
Full Stack Developer Onsite

- Built the RAG pipeline for a company product that crawls and indexes a given website's content, then uses the Gemini API to answer strictly from retrieved context — grounding every response in the site's own data.
- Built an MCP server on top of the existing backend, exposing product APIs as tools consumable by AI clients (e.g., Claude) to enable direct AI-to-product interaction.
- Implemented the Adjust SDK for campaign attribution and built deep-link routing logic to accurately track and route users from marketing campaigns into the app.
- Optimised RESTful APIs, reducing average response time from **1,200ms to 350ms** (71% improvement).
- Containerized microservices with Docker Compose and built CI/CD pipelines via GitHub Actions for streamlined releases; added E2E test coverage using Playwright and Jest.
- Integrated Stripe for end-to-end payment processing, including real-time webhook handling for transaction events.

Envirt Solutions May 2024 – May 2025
Full Stack Developer Onsite

- Built a backend pipeline integrating YOLOv5 object detection with a live video streaming service (MediaMTX) that transcoded RTSP drone feeds to WebRTC, running inference at **35 FPS** on Jetson Orin edge compute across a 4–6 drone fleet.
- Built the frontend visualization layer using Deck.gl and Azure Maps for real-time 3D multi-drone flight-path tracking and geospatial zone-based alerts.

Volvo Solutions Sept 2023 – May 2024
Full Stack Developer Onsite

- Developed unified partner dashboards (Next.js, TypeScript) aggregating data from multiple sources for mobile users.
- Delivered an Offline-First PWA (Firebase) using service-worker based caching for instant load times, driving a **40%** increase in PWA installs on Android.

PROJECTS

Drobe — AI Fashion Try-On Platform | Founder & Full-Stack Engineer drobe.live

- Architected and built an AI-powered virtual try-on platform end-to-end as sole founding engineer — Flutter app (Riverpod), Go backend (chi, PostgreSQL, Redis), and two Next.js apps (admin portal, consumer PWA); deployed via a self-hosted PM2 setup.
- Designed a zone-aware virtual try-on system across 12 garment categories, evaluating open-source models (CatVTON, Qwen) alongside Google Gemini/Vertex AI, and engineering both a single-call multi-garment endpoint and a sequential outfit-layering flow to balance quality against API cost.
- Implemented admin security — mandatory TOTP 2FA, role-scoped route authorization, and full audit logging; independently audited the portal and resolved **13 issues** including a stored XSS vulnerability.
- Built a coin-wallet monetization system with Razorpay integration, including HMAC-verified webhook handling and idempotent order processing, designed as the platform's primary revenue mechanism.

PathSynq — Pothole & Road Jerk Detector PWA | Personal Project pathsync.rahulsh.tech

- Built a mobile-first PWA using JavaScript and device motion sensors (accelerometer, gyroscope) to detect potholes and road jerks in real time.
- Mapped flagged locations via Mapbox, capturing intensity data to surface road-condition hotspots.

EDUCATION

JECRC College 2019 – 2023
B.Tech in Computer Science Engineering (CGPA: 7.94) Jaipur
